DS Agrifoods Pvt. Ltd.

A Govt. of India Recognised Star Export House

About Us

DS Agrifoods is in a commanding position in the world of packaged rice made to conform to international standards. The roots go deep, back about 20 years ago when our founders had a dream and a grand vision of giving the world a taste of India's finest rice. We put in the solid groundwork, relentless effort, unceasing watch over quality, and perseverance in the achievement of goals. We have come far. We have miles to go but have confidence gained from trust reposed in us and our brands. DS Agrifoods is one of the India's premier exporters of premium Basmati rice and non-Basmati varieties. Our range also covers rice for everyday use and rice for special occasions, as well as rice to suit special preferences.

Our production unit is located in the pristine and verdant valley of Pilibhit in UP, nestling in the lap of the Himalayas. In pursuance of our vision to excel, we kept on modernizing machinery and processes. Our unit has automated equipment for parboiling, milling, sorting, and packing with a capacity of 12 MT per hour. The standout equipment is the Satake Milling machinery from Japan and Buhler of Germany to assure the highest standards of hygiene. The name DS represents consistency and quality.

DS Agrifoods is family owned but with a modern, corporate approach to business. The combination works perfectly across all levels: from procurement to sorting, inbound quality checks, processing, packaging, distribution and marketing. Service and support are top priorities. We are always approachable, even by the last link in the retail chain. We listen to what customers want and it goes into the refinement of our products and services.

Why DS Agrifoods?

- As explained in the foregoing paragraphs, DS Agrifoods is the mark of purity, refinement, trust, and excellence. We are committed to guarding our reputation and continuing the tradition of service.
- We have a no-compromise approach to quality. Profits are secondary. Product excellence and customer satisfaction rank high.
- DS Agrifoods has a holistic approach to manufacturing and production - in consonance with environmental concerns, the safety of lives and nature, and creating a positive atmosphere.
- R & D is at the root of our progress. We innovate, experiment, and develop constantly to give the world a better product.

Certification

We are conscientious and particular about everything to do, considering that we are handling food products. As such, we follow the most rigorous procedures and policies conforming to international standards. Our certifications are proof. Our company has obtained various certifications few to mention are ISO 22000, HACCP, Kosher Halal, ISO 9001-2015, SFDA, GMP, FSSAI.

Awards

Our years of cumulative hard work and efforts have received meritorious recognition in the shape of various state awards from the Government of Uttar Pradesh. Our company has been recognized as a Star Export House by the Government Of India.

Technology

Realizing far back that manual processes are error-prone, we decided to adapt to changing trends in technology. DS Agrifoods is among the early pioneers in incorporating technology in all its manufacturing processes. We rely on computerized, sensor-driven, software-powered technologies to handle high-speed processes to perfection, with consistency and reliability built-in.

On the one hand, we have an R&D section where we have state-of-the-art equipment to test and verify rice to all known parameters besides developing our own.

On the other hand, all our processes are nearly automated with minimal human intervention. Paddy that is taken in as raw material undergoes stringent laboratory tests. Downline processes such as cleaning, de-husking, milling, sorting, and grading are handled by automated sequenced procedures controlled by a central unit with sensors to check several parameters. Our equipment is sourced from Japan and Germany.

The same meticulous attention to detail reflects in our final quality tests prior to packaging and automated packaging untouched by human hands, assuring the highest standards of hygiene.

We are now in the planning stage of implementing AI-powered equipment that will take production and quality to higher standards. We lead by actions.

Basmati Rice

Basmati rice is a variety of long-grained rice that mainly originates in the foothills of the Himalayas and is traditionally served in Indian and Middle-Eastern cuisines with a firm texture, pointy ends and a distinctive flavour. After cooking, each grain elongates at least twice of its original size with a soft and fluffy texture and is absolutely non-sticky. Basmati rice is unique among other aromatic long-grain rice varieties.

One cup (200g) of cooked Basmati Rice provides the following nutrients:

205
Calories

4.2 gm
of protein

44.5 gms
of carbs

0.7 gm
of fiber

Its nutty, floral aroma and soft, fluffy texture work well in many dishes. It's a particularly great choice for biryanis, pulaos, and side dishes.

Compared with other types of rice, basmati rice is lower in arsenic, and heavy metal that can harm your health.

100% Natural

Non-GMO
